Election/Restrictions

1. Applicant's election of Species A, figs. 1-6, claims 1-4 in the reply filed on 09/13/2004 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 5-15 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 09/13/2004.

REASON FOR ALLOWANCE

3. Bourdeau discloses a skate with in-line wheels comprising a central hub which is made of two pieces, a bearing on the outer portion of the hub, and an outer ring portion, an axle which is joined to the chassis by an elastic spring device. Zhang discloses an auto-electric flash wheel of a rolling skate comprising a central hub disposed around a shaft, a fly wheel and at least one coil unit. The fly wheel is enclosed by a transparent outer wheel. Lee discloses a high performance in-line skate roller comprising an inner core made of two separate pieces, an outer core part with a plurality of horizontal members therein adapted to be affixed to the inner core member. Meader discloses a skate wheel comprising an inner core member of plastic material, a coil spring integrally made with and disposed around the inner core of the wheel, an elastomeric tire enveloping the coil spring. However, none of the references of record suggests a wheel for in-line skates comprising a connector extending between the inner ring portion and the outer ring portion, wherein the central hub includes a reception cavity provided in

the connector with a weight and an elastic element for biasing the weight to the inner ring portion in the manner defined in the instant claim 1 and in combination with other limitations of the claims. Therefore, claims 2-4, depending therefrom, are considered to be allowable.
